

# What is Pickleball?

**Pickleball is a paddle sport that originated in Washington State in the USA in the 1965.**

The game is played either **indoors or outdoors** as **singles or doubles** and can be played by most ages and abilities.

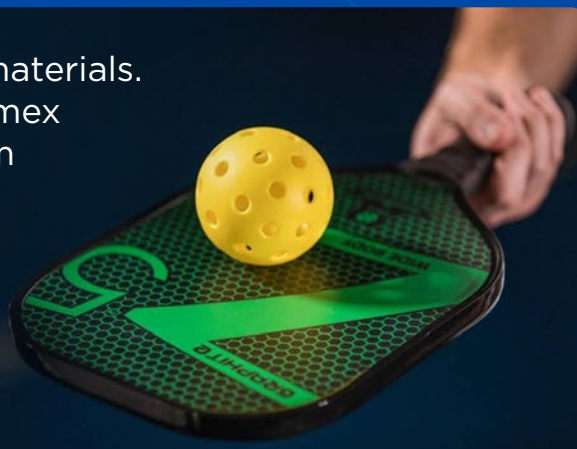

The **tennis-like net** is hung 91.5cm on the ends and 86.4cm at the center.

The **'kitchen'** is the area between the net and the 2.13 meter line on the court.

The **boundary lines** are striped like a tennis court without the alleys.

**Paddles** are made from a variety of different materials. The core material includes wood, polymer, Nomex or aluminum, and the paddle face is made from carbon fiber, fiberglass or graphite.

**Pickleballs** are hollow, plastic balls with holes throughout the exterior like a wiffle ball. Different ball models are intended for indoor and outdoor play.
